

HYDROGUARD WATER PROTECTION

Professional Product Fact Sheet

Protecting Homes From Costly Water Damage

HydroGuard provides professionally installed smart water-leak detection and automatic water shut-off — engineered to catch a leak before it becomes a costly, disruptive repair.

THE COST OF WATER DAMAGE IN THE WESTERN CAPE

A burst geyser, a failed pipe joint, or a washing machine hose that lets go can turn a routine plumbing problem into a major repair bill within hours. It isn't just the plumber's callout — it's the ceilings, walls, flooring and possessions damaged before the water is shut off.

R1,000 – R3,500 for the plumbing repair alone	R50,000+ once ceiling, wall and flooring repairs are added in
---	---

Source: South African plumbing and water-damage repair cost guides — figures are indicative and vary by property and extent of damage.

These figures cover repair costs alone — before factoring in additional expenses such as alternative accommodation, replacing damaged flooring or furniture, and the time spent managing contractors and insurance claims. A HydroGuard system cannot prevent every plumbing failure, but by shutting off the water automatically the moment a leak is detected, it is designed to stop a routine repair from turning into a major one.

TWO LEVELS OF PROTECTION

HydroGuard offers two professionally installed systems, each built around detect, alert and shut-off — with Premium extending that protection further.

PREMIUM — RECOMMENDED

HydroGuard Premium — Complete Protection

For homeowners who want comprehensive protection for their property — not simply a leak alarm.

From R18,800 installed

Standard installation in the Helderberg / Stellenbosch area

Best for: larger and high-value homes, multi-storey properties, luxury homes and estates, holiday homes, frequently unattended properties and frequent travellers.

- ✓ Built on a professional wireless security-grade ecosystem, with a central hub, wireless leak sensors, automatic WaterStop shut-off, and full mobile app control
- ✓ Up to 7 strategic leak sensors, subject to risk assessment
- ✓ Smart leak detection with automatic water shut-off
- ✓ Mobile alerts and remote monitoring & management
- ✓ Professional installation, configuration and full commissioning
- ✓ Water Risk Assessment and client training included
- ✓ Product warranty and insurance-compliant CoC, where applicable

DETECT → ALERT → SHUT OFF → MONITOR

HydroGuard Essential — Core Protection

A cost-effective way to obtain smart leak detection and automatic water shut-off.

From R13,600 installed

Standard installation in the Helderberg / Stellenbosch area

Best for: family homes, budget-conscious homeowners, rental and holiday properties, and homeowners wanting reliable core protection.

- ✓ Built on a smart-home ecosystem
- ✓ Smart water-leak detection with strategically positioned sensors
- ✓ Automatic water shut-off and mobile leak alerts
- ✓ Remote system status/control, subject to configuration and connectivity
- ✓ Professional installation, configuration, testing and commissioning
- ✓ Client training, product warranty and insurance-compliant CoC, where applicable

DETECT → ALERT → SHUT OFF

WHY HOMEOWNERS CHOOSE PREMIUM

The difference between Essential and Premium comes down to sensor coverage, equipment grade and price — and it's the reason Premium is our recommended system for most properties in the Helderberg and Stellenbosch area.

- ✓ Broader coverage: up to 7 sensors placed according to your property's actual risk points, versus a leaner sensor set on Essential — more coverage means fewer blind spots.

- ✓ Higher-grade equipment: Premium is built on a professional wireless security-grade ecosystem engineered for continuous, reliable communication across larger or more complex properties.
- ✓ Advanced remote monitoring: manage and check your property's protection status from anywhere, not just receive an alert after the fact.
- ✓ The maths favours Premium: one burst pipe, one flooded floor, or one insurance excess payment typically costs more than the entire price difference between Essential and Premium — Premium is the cheaper option the moment something goes wrong.

For larger, higher-value or frequently unattended properties, HydroGuard Premium is our recommended solution — combining a professional-grade protection ecosystem, a broader sensor network and advanced monitoring.

STOP A LEAK BEFORE IT BECOMES A DISASTER

Final system configuration and pricing are determined following your property's Water Risk Assessment. Warranty and Certificate of Compliance terms are subject to the equipment installed and applicable requirements.
